

February 2020

VASS checks 50161 (APC) amended
'Invalid Site Code (of Treatment)'

This check previously looked at whether the site code was active within reference data (WRDS) at the episode end date and whether it was a hospital site.

As the scope of the APC data set is not restricted to activity which takes place on a hospital site (e.g. day case activity which takes place in a mobile unit is within scope), this check now only looks at whether the site code was active within reference data (WRDS) at the episode end date.
